3G

1. What are the three sets in handover?

The 3 sets in handover are:

- Active set – the list of cells which are in soft handover with UE.
- Monitored set – the list of cells not in active set but RNC has told UE to monitor.
- o Detected set – list of cells detected by the UE but not configured in the neighbor list.

2. What are the major differences between GSM and UMTS handover decision?

GSM:

Time-based: mobile measures of RxLev and RxQual – mobile sends measurement report every SACH period (480ms). BSC instructs mobile to handover based on these reports.

UMTS:

Event-triggered reporting – UE sends a measurement report only on certain event "triggers".
